SUMMARY

Data Analyst with hands-on experience in driving revenue growth, margin optimization, and operational efficiency in a fast-paced eCommerce startup. Built automated KPI dashboards, pricing models, and inventory forecasting systems to improve profitability and decision visibility. Strong in SQL-based analysis, Excel modeling, and dashboard reporting, with a focus on delivering actionable, business-impact insights.

SKILLS

- **Programming Languages** : Python (Pandas, NumPy, Matplotlib, Seaborn), SQL
- **Databases & Tools** : MySQL, GitHub
- **Data Visualization Tools** : Power BI, Excel (Power Query, Pivot Tables), Google Sheets
- **Soft Skills** : Problem Solving, Critical Thinking, Public Speaking
- **Analytics & Methods** : Data Cleaning & Wrangling, Data Modeling, Business Intelligence, Data Analysis, Statistical Analysis, Inventory Forecasting, KPI Frameworks, Reporting & Automation

EXPERIENCE

• **Data Analyst - PalkStreet** Dec 2024 – Present

- Designed and automated a centralized KPI reporting system in collaboration with leadership to define and track core business metrics, using Python for backend processing and Power BI for visualization, reducing 15+ hours of manual reporting weekly.
- Built a structured pricing model in Excel incorporating cost price, marketplace fees, taxes, and ad spend, standardizing pricing across 50+ products and maintaining consistent 20–35% net profit margins.
- Executed weekly sell-through and inventory analysis for top ASINs using advanced Excel models to improve replenishment accuracy, maintaining 93%+ stock availability and driving a 13–16% monthly sales increase.
- Reduced Return-to-Order (RTO) rate from 16.2% to 11.5% by collaborating with Catalog and Operations teams to bridge product expectation gaps. Leveraged SQL and Power BI to identify root causes, resulting in 10L+ annual cost savings and improved order quality by 29%

PROJECTS

- **Retail Orders Data Analysis**
End-to-End Data Pipeline Project • Python, SQL [Link](#)
 - Built an end-to-end ETL pipeline using Python (Pandas, NumPy) and MySQL to process and analyze 9,994+ retail transactions, improving data usability for business insights.
 - Automated data extraction from Kaggle API and performed cleaning, feature engineering, and transformation to derive KPIs such as profit, discount, and sale price.
 - Identified key insights including \$8.7M total revenue, 28% profit margin, and 4.9% YoY revenue decline, enabling strategic decision-making.
- **HR Data Analysis**
Data Visualization Project • Excel, Power BI [Link](#)
 - Built an interactive HR analytics dashboard in Power BI analyzing FY 2022–2023 employee attendance data to generate workforce insights across presence, WFH, and leave patterns.
 - Transformed raw multi-sheet Excel attendance data using Power Query and developed a structured data model in Power BI, creating DAX-based KPIs such as Presence %, WFH %, Sick Leave %, and Paid Leave % for consistent and automated reporting.
 - Identified key workforce trends including >90% overall presence rate, higher WFH adoption on Mondays and Fridays, and seasonal spikes in sick leave during winter months.

EDUCATION

- **IIIT Bhubaneswar** Bhubaneswar, Odisha
Bachelor of Technology - Electrical and Electronics 2020 – 2024
- **Sri Chaitanya Institutions** Vijayawada, Andhra Pradesh
Intermediate Education in Maths-Physics-Chemistry 2018 – 2020

CERTIFICATIONS/ACHIEVEMENTS

- Hacker Rank SQL - Gold
- Core Python for Beginners Course - Frontlines Edutech
- Google Data Analytics Professional Certificate - Coursera
